DETAILED ACTION

1. Applicant is advised that the Notice of Allowance mailed is vacated. If the issue fee has already been paid, applicant may request a refund or request that the fee be credited to a deposit account. However, applicant may wait until the application is either found allowable or held abandoned. If allowed, upon receipt of a new Notice of Allowance, applicant may request that the previously submitted issue fee be applied. If abandoned, applicant may request refund or credit to a specified Deposit Account.
2. The indicated allowability of claims 4, 5, 7-16, 18-21 and 23-28 is withdrawn in view of the newly discovered reference(s) to Thomas et al. (US 5,215,080). Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 4, 5, 7-16, 18-21 and 23-28 are rejected under U.S.C. 102(b) as being anticipated as understood by Thomas et al. (US 5,215,080). Thomas et al. (hereinafter Thomas) discloses a device (40) to protect the neck and the base of the skull while

allowing unimpeded motion of the head from either side to side or front to front adapted to be worn with a helmet that makes contact with the wearer at multiple and distinct location by distributing force of impact that including a first free hanging impact resistant pliable substrate that extends upward from approximately the first thoracic vertebra to the base of the cranium when it ends in a free hanging depending end under the helmet that forms a zone of unbroken neurological protection to the back of the neck as shown in figures 2, 7 and 8.

Further, straps/rigid planar substrate shield (12') extends from the first substrate having closure/securing means (14,30) and around a ventral region of the neck as shown in figures 2 and 8. Further, the first substrate defines an arcuate outer shell with a integral cushioning substrate (18') as shown in figure 1. Also, the device has a pouch (34) defined between integral first and a second substrate (33',35') having cold pack therein.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to Applicant's disclosure.
